**YOUNG STAND MAINTENANCE BRUSHING and Pre-COMMERCIAL THINNING
with
FUEL HAZARD REDUCTION PROJECT**
(EA #OR110-02-13, March 2002)

DECISION RECORD / RATIONALE / FONSI
(- #4 -)

I. DECISION

The decision is to implement Alternative 2, the proposed action alternative, for the Young Stand Maintenance Brushing and Precommercial Thinning with Fuel Hazard Reduction Project as follows:

- The proposed action(s) will be implemented for those units which have had all required surveys completed between July 3, 2002 and the date of this Decision Record. These units are identified in the attached Table 6 - DR#4.
- Three previous decision records, (April 29, 2002, June 19, 2002, and July 3, 2002) addressed some of the units proposed for the young stand / fuels treatments - those with surveys completed prior to April 29, 2002, those with surveys completed prior to June 19, 2002, and those with surveys prior to July 3, 2002. These units are, therefore, not a part of the present decision.
- Any decision regarding implementation of the proposed action on any of the units for which all requisite botanical or wildlife surveys have not yet been completed is deferred until such surveys are completed and any requisite protection measures are determined. Separate Decision Records will be prepared to document any future decisions regarding the treatment of these units.

The attached Table 6 - DR#4 identifies those twenty-five (25) units that have had all surveys completed during the above specified time period and which are, therefore, included in this decision. They are identified by having a botanical survey date indicated that is between July 3, 2002 and the date of this decision. (*Note:* Table 6 - DR#4 is the same as Table 6 in the EA with two exceptions: (1) the 5th Field Watershed column has been removed and (2) a column indicating the date of botanical surveys has been added.) All of the units have been reviewed by a wildlife biologist to identify requisite surveys; no additional surveys are needed.

The decision also includes the implementation of all of the project design features described in the EA are an integral part of the proposed action and are to be implemented.

II. DECISION RATIONALE

Alternative 1, the No Action Alternative, is rejected because it does not meet the objectives identified in the Medford District Resource Management Plan. It would not address or alter many of the existing resource conditions and trends that are of major concern relative to healthy forest conditions and resource protection. The No Action alternative would perpetuate or promote undesirable resource conditions. With the No Action, these conditions would not be improved or mitigated; certain undesirable ecological trends would continue unchanged and, in some cases, would be exacerbated with the passage of time. For example, high fire hazard conditions would continue and grow and stand vigor and forest health would not be promoted.

Alternative 2 is selected because it implements the Medford District RMP and the Northwest Forest Plan. It will also meet the purpose of and needs for action and the objectives as outlined in the EA.

The Decision will also implement activities that promote a number of goals included in the BLM's Strategic Plan for FY2000 to FY2005:

- *Goal 1.4: Reduce threats to public health, safety and property.*

All of the areas to be thinned include fuel treatment proposals to reduce the fuel hazard levels and, in turn, to provide better protection of public property / resources. The decision also includes a review of fuel loadings / hazard after thinning treatments are completed to insure optimum hazard reduction treatments and to facilitate prioritizing expenditures for this type of treatment.

- *Goal 2.2: Restore at-risk resources and maintain functioning systems*

This project will result in reduction in fuel loadings and stand densities moving them closer to historical levels. It will promote survival in the young stands and accelerate growth and the development of older forest and the restoration of older forest habitats in the young stands being treated.

III. CONSULTATION AND COORDINATION

Pursuant with the Endangered Species Act, consultation at a programmatic level has been completed with the US Fish and Wildlife Service (USFWS) and the National Marine Fisheries Service (NMFS).

The Confederated Tribes of the Siletz and of the Grande Ronde were notified of this project during the scoping and / or the EA's public comment period. Josephine County Commissioners and the Josephine County forestry department were also contacted. No responses were received.

IV. PUBLIC INVOLVEMENT

A formal public comment period on this project and project EA was provided during March - April 2002. A single letter of comment was received with general comments regarding the project proposal. No new information regarding potential impacts was included.

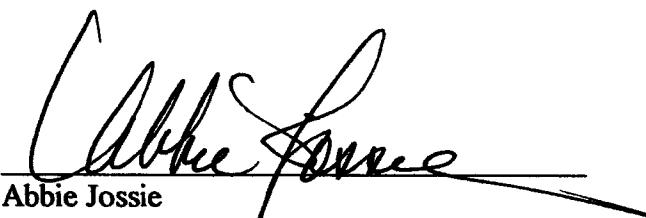

V. CONCLUSION AND FINDING OF NO SIGNIFICANT IMPACT (FONSI)

Based on the information in the project's EA and in the record, and the letter received from the public about the project, I conclude that the decisions in this Decision Record are consistent with the Medford District Resource Management Plan, the Record of Decision and Standards and Guidelines on Management of Habitat for Late-Successional and Old-Growth Forest Related Species Within the Range of the Northern Spotted Owl and, the Record of Decision and Standards and Guidelines for Amendments to the Survey and Manage, Protection Buffer, and other Mitigation Measures Standards and Guidelines (January 2001). They are also consistent with the Endangered Species Act, The Native American Religious Freedom Act and cultural resource management laws and regulations.

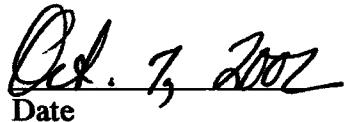

On the basis of the information contained in the environmental assessment and the record for this project, it is my determination that the decision stated above will not result in significant impacts to the quality of the human environment beyond the range of impacts and effects considered in the RMP and NFP EIS documents and that were accepted in their respective Records of Decision and to which the present project's EA is tiered. Therefore, an Environmental Impact Statement is not warranted and will not be prepared.

VI. ADMINISTRATIVE REMEDIES

This decision is a forest management decision. Administrative remedies are available to persons who believe that they will be adversely affected by this Decision. Administrative recourse is available in accordance with BLM regulations and must follow the procedures and requirements described in 43 CFR 5003 - Administrative Remedies. In accordance with the BLM Forest Management Regulation 43 CFR 5003.2 (a&c), the effective date of this decision will be the date of publication of a Notice of Decision and FONSI in The Grants Pass Daily Courier. Any contest of this decision should state specifically which portion or element of the decision is being protested and cite the applicable CFR regulations.

Abbie Jossie

Footnotes:																			
Precommercial Thinning Silv. Prescription from Table 1 of EA - One of eight (8) potential silvicultural treatments prescribed for units. Brushing Prescription from p. 4 of the EA.																			
Riparian Designation - P = Perennial with fish and Perennial without fish. I = Intermittent no fish - = No streams																			
Fish/No Fish - Absence Not Verified - (ANV) - Streams with fish - Presence Not Verified - (PNV) - Streams without fish																			
Fuels Hazard - Completed by Fuels personnel using information on fire hazard from Watershed Analysis work.																			
Fuels Risk - Completed by Fuels personnel using information on fire risk from Watershed Analysis work.																			
Fuels Priority - Based on Hazard, Risk, Value and proximity to communities at risk.																			
Fuels Prescription - Taken from Table 3 in EA. 1 = Slashbuster; 2 = Piling up to 100% of unit; 3 = Piling up to 50% of unit; 4 = No fuel reduction method planned.																			
Fuels Remarks - Areas where units to be treated are in close proximity and the extent of annual treatments should be limited. See Fuel mitigation map #1.																			
NSO - Northern Spotted Owl seasonal operating restriction applies.
